

High-Quality, Earth-Friendly Rain Barrels

(at the preposterously low price of \$68!)

These reconditioned food-quality barrels hold 50 gallons of rain water, enough to nurture a small garden.

- Strong, durable materials including brass spigot
- Reused rather than new barrel
- Filter & overflow screens keep out debris and mosquitoes
- Removable filter makes draining for winter easy
- High-quality seals prevent leakage
- Gutter-size overflow keeps water away from foundations
- Connectible to a second barrel for 50 gall's. more capacity
- Delivery & installation possible (in Monroe County or Indianapolis)

Your rain barrel may need one or more of the following, most of which can be ordered along with the barrel:

A downspout adapter to channel rainwater from your downspout to your barrel -

- either a "flex elbow" (far left and right), \$10 from Earth Care
- or a diverter (near left), about \$30 plus shipping from the web, that channel rainwater back to your downspout when the barrel is full.

An extension to lengthen the barrel's overflow outlet. A hard rain can fill your barrel in minutes. You'll need an extension **only if** you will not switch your downspout adaptor back into your downspout whenever your barrel is full **and** you need to direct excess water more than 2.5 feet away from your home.

- Either a 1- to 4-foot firm white PVC extension pipe (far left)
- Or a 5- to 10-foot flexible black plastic extension pipe with an adaptor (near left)

A pair of concrete blocks so that your rain barrel – which will weigh 400 pounds when full – sits on a flat surface and can fit a standard 10-inch tall bucket under its spigot.

“Earth Care, bringing together Hoosiers of faith to help curb climate change.”
